Bandar Sunway, Selangor, Malaysia. Malaysian citizen. Open to remote. Open to relocating to Singapore or Australia.

SUMMARY

Full-stack engineer building production services in Go, TypeScript and Python on PostgreSQL, Redis and Kubernetes, with digital-commerce experience in payment-gateway integration and merchant onboarding.

EXPERIENCE

Jun 2026 - now

Deriv

AI Engineer · Full-time

Go, FastAPI, Next.js, Kafka, Terraform, AWS EKS/EC2

- Shipped a full-stack customer-support system that proactively resolves user issues.
- Built a Go microservice that unifies data from 4-6 internal services into a single response for the support system, now running in staging.
- Built and operate Kafka- and API-based ingestion pipelines for reliable downstream analysis.
- Built evaluation and debugging harnesses that reproduce failures and capture environment signals.
- Updated the team's Terraform configurations while scaling existing infrastructure and provisioning new services.

~80% lower CX cost Production CSAT 5/10 → 8/10 Production

~20,000 complex events/day Production ~50% faster time-to-fix Production

~10-30% lower AWS cost Production 4-6 services → one response Capability

Jan - Jun 2026

Skribble Lab

Software Engineer · Full-time

Laravel, PostgreSQL, Redis, Docker

- Owned the Xendit payment-gateway integration end to end, from requirements review through production support.
- Designed and shipped a merchant onboarding module for product and payment setup, and onboarded the primary client, Chung Ling Private High School.
- Hunted integration breakage and production defects before customers found them.

5+ merchants on Xendit Production 3,000+ students and parents Production

Weekly production errors 16 → 3 Production

Nov 2025 - Feb 2026

Monash University

Full-Stack AI Engineer · Contract

FastAPI, Neo4j, Next.js, LangGraph

- Built a FastAPI and Neo4j graph service for university regulations with a self-correcting Text-to-Cypher loop.
- Automated prerequisite and credit-transfer rule resolution with embeddings plus multi-hop graph queries.
- Profiled and simplified the reasoning pipeline into a graph-logic SLM that surfaced contradictory policy data for administrators.

+45% retrieval vs vector-only Controlled evaluation

-50% inference latency Controlled evaluation

Feb - Dec 2025

Western Digital

Full-stack Engineer · Contract

Next.js, ASP.NET, PostgreSQL, Docker

- Built the lab-operations dashboard used by 50+ lab staff, with WebSocket station-status and model-inference updates under 100 ms of UI-visible latency.

-40% manual oversight Controlled evaluation

Jul - Dec 2025	Setel Software Engineer Intern · Internship Docker, Kubernetes, React, Node.js, MongoDB, NestJS Authorization and capture of stored payment methods on the payment engine, documented so a new developer could follow the path without a walkthrough. 92.5% unit-test coverage Controlled evaluation -40% production defects Production
Nov 2024 - Feb 2025	Petronas Project Engineer Intern · Internship MATLAB, Python, MathCAD Replaced MATLAB-dependent back-end calculation and reporting functions with Python packages, removing paid runtime dependencies.

Western Digital (Feb-Dec 2025) overlapped with the Setel internship (Jul-Dec 2025) and final-year study. The Monash contract (Nov 2025-Feb 2026) overlapped with the start of Skribble Lab (Jan 2026). I graduated in April 2026 and joined Deriv in June.

PROJECTS

Jul 2026	FaultLine Regression and leak-evidence CLI · Solo Go, Docker, GitHub Actions, Sigstore Replays a frozen, human-reviewed check across Git history in Docker sandboxes to find the first reliable PASS→FAIL commit. First PASS→FAIL commit in 1-5 min Controlled evaluation 1-3 h saved per investigation Controlled evaluation github.com/Mizore66/faultline
Mar 2026	Gemini Teleportal Voice-controlled desktop AI agent · Built with Kai Next.js, TypeScript, Python, Gemini Live API, WebRTC, Firebase, Cloud Run Streams phone audio and screen video to the Gemini Live API, which drives the Windows desktop by exact UI element ids. 90%+ of demo desktop tasks, unaided Controlled evaluation ~2-5 s from voice to action Controlled evaluation github.com/Kaiz404/Teleportal
Mar 2026	CircuitMindAI PCB inspection · Solo Next.js, Amazon Bedrock, Express, OpenSearch Serverless, GitHub Actions, ECS Fargate Images in, voice-guided inspection steps out, with cached results for network loss. Vision and voice PCB inspection Capability github.com/Mizore66/CircuitMindAI
Apr 2026	RexCheck DeFi pool health scoring · Built with Chang Kai Zhe Python, asyncio, Redis, Rails 8, Hotwire, PostgreSQL, XGBoost, MCP New DeFi pools in, a health score and a trade recommendation out, for a live dashboard and for AI agents. Pool health scoring over MCP Capability github.com/Mizore66/RexCheck
Apr 2026	Veridian MLOps tradeoff engine · Solo Python, Terraform, BigQuery, GCP Vertex AI, GitLab Duo, MCP Intercepts Terraform and Kubernetes and recommends a lower-carbon compute configuration before

provisioning or a demand-driven scale event.

-15% cloud emissions Controlled evaluation **99.9% observed uptime** Controlled evaluation

Private repository

Oct 2025

Multi-Agent GraphRAG

Policy-corpus retrieval · Solo

LangGraph, Neo4j, Vector DB, Knowledge Graphs, RAG

LangGraph over an independent university handbook and policy archive, with a vector fallback.

+35% retrieval vs vector-only Controlled evaluation

Private repository

May 2025

MirrorFi

Solana vault strategy platform · Hackathon team of 6

Next.js, ShadCN, MongoDB, Solana, Node.js

A no-code builder for sharing and executing Solana yield strategies across Drift, Jupiter and Meteora.

Grand Prize, Solana Megahack 2025 Award

github.com/Mizore66/MirrorFi

Jul 2025

Financial Risk Predictor

ML risk assessment · Solo

TensorFlow, XGBoost, LightGBM, BentoML, SHAP, Kafka

Daily credit-risk scores that have to be interpreted, served, and retrained.

0.87 AUC-ROC Controlled evaluation

Private repository

May 2025

Distributed Lead Scorer

Large-scale data mining pipeline · Solo

PySpark, PyTorch DDP, Deep Interest Network

Scores conversion on a hundred million events a day, with checkpoints so a failed hour can resume.

100M-event capacity benchmark Capacity benchmark

Private repository

Jul 2025

SLM Distillation Engine

Knowledge distillation and fine-tuning · Lab experiment

PyTorch, QLoRA, DeepSpeed, FlashAttention

A 70B teacher distilled into a 3B student with QLoRA, DeepSpeed and FlashAttention.

70B → 3B student Controlled evaluation

Private repository

+45% is the Monash contract on university regulations. +35% is the independent GraphRAG project on a separate university handbook and policy archive. Same comparison, vector-only, different corpus. The halved inference latency elsewhere on this site belongs to the Monash contract's graph-logic SLM, not to this project.

EDUCATION

Apr 2026

Monash University

Bachelor of Engineering (Honours), Software Engineering

Minor in Artificial Intelligence. WAM 81.8, CGPA 3.78. Bandar Sunway, Selangor, Malaysia.

AWARDS

- First Class Honours
- Best Graduate Award
- Dean's List

Grand Prize, Solana Megahack 2025 (MirrorFi, team of 6, out of 150+ teams)

SKILLS

Languages	Go, TypeScript, Python, JavaScript, SQL, PHP, C#, HTML/CSS
Frontend	React, Next.js, Tailwind CSS, ShadCN, jQuery
Backend and APIs	Node.js, NestJS, FastAPI, Laravel, ASP.NET, REST APIs, WebSockets, WebRTC, Kafka, Microservices
Data	PostgreSQL, Redis, MySQL, MongoDB, Neo4j, Elasticsearch
Cloud and DevOps	Kubernetes (AWS EKS), Docker, AWS (EC2, EKS), Google Cloud (Cloud Run, Cloud Build, Firestore), Terraform, ArgoCD, GitHub Actions, GitLab CI/CD, Grafana, Loki
AI/ML	LangGraph, PyTorch, TensorFlow, pandas, NumPy

AI Engineer at Deriv since June 2026. Open to conversations about mid-level software engineering roles.
